

## ABOUT

I've been working as PHP developer since 2011, last year I started to dedicate more time with open source projects, the main is the myprofile.pro, a personal project. Made in Symfony 3 and migrated to Symfony 4, using also Cloud flare as DNS and CDN, IBM Object Storage, Heroku as PaaS, and in the future Kubernetes.

A little about my professional trajectory, I started my career at Opensystem making application as Helpdesk, manteiner websites and integrations to medical clinics systems. At Mob telecom, I worked in a hosting web site making some integrations with WHOIS and also in other project migrating clients and financial billing, something about 4 thousand customers, and my last experience went at Oowlish, I worked in a project called Petcoach.co something like 200 simultaneous access and after one year I started in my first python project called Wellness plan with big customers as Petco, Adobe and Salesforce.
